

E-TABLE

Jeff Cronk, USA

coalesse®

Technology Integration.

No other conference table equals the e-table in user accessibility and power/data capacity.

———— The elegant utility bay doors spring open at the touch of a button for easy access to technology and power. Once you are plugged in, the doors close to hide cords, wires, power adapters, and excess clutter from the tabletop.

———— This tabletop access complements E-Table's high capacity vertical and horizontal wire management system.

———— With support for up to seven utility bays, E-Table's design works with virtually all types of network, telephone and audio-visual components. The large base and wireway cavities are roomy enough for even the thickest VGA cables and bulky transformers.

———— With a multi-circuit electrical system available in a variety of wiring options, e-table provides power for even the most demanding users.

PRODUCT SPECS

DETAILS

Product Features

- Veneer base (A)
- Laminate base (B)
- Aluminum base (C)
- Drum base (D)
- Utility bay opened (E)
- Utility bay closed (F)
- Raceway (G)
